

# Hoylu Software

The Hoylu software provides a near-infinite workspace canvas where users are able to collaborate interactively from any location. Hoylu connects users, screens, and materials together for real-time interactive experience that is changing the way work gets done.

## Modules

Hoylu's modules are designed with specialized business logic for a range of processes. For example, our Pull Planning module includes specific features for task management, such as adding description fields to a note while our Kanban module allows you to customize your swimlanes.

## Integrations

Hoylu's solution is non-proprietary and built on open standards, allowing for compatibility between any third-party application. Hoylu is now available on the **Microsoft Teams** store.

# HoyluWall™

HoyluWall is a large-format interactive display that spans up to 8 meters of digital real estate with seamless multi-channel support. Hoylu's Interactive Visual Software promotes an in-same-room experience with both real-time, remote collaboration support and multiuser input on the HoyluWall.

## Any Device. Anywhere.

Hoylu is available on all internet-enabled devices. Access your workspaces from your desktop, tablet, or smartphone.

## Pull Planning Module

for construction, product development, and project management.

## Use Cases

Hoylu's intuitive IVC software is outfitted for free-form use while also supporting standard processes. All processes that you facilitate with pen, paper, and pin-boards can be facilitated in Hoylu and saved to the cloud.
